

Trend Micro™

Software as a Service Security Solutions

Industry-leading in-the-cloud content security protection

The growing number of malicious attacks, whether email-borne, from the web, or across the network, is impacting organizations in many ways. Threats are rapidly evolving, increasing the complexity of managing onsite security solutions with finite IT resources. For the best protection, organizations need to manage threats in the cloud, before they can reach the network and compromise their IT infrastructure or information security.

Trend Micro's SaaS security solutions provide industry-leading Internet content security for small, medium and enterprise businesses, as well as our channel, technology, and service provider partners. From components supporting a gateway, server or desktop application to complete hosted service offerings, these SaaS security solutions leverage the strength of the Trend Micro™ Smart Protection Network to immediately and automatically protect your information, wherever you connect, against the latest threats before they can reach you.

SaaS Security—Powered By The Trend Micro™ Smart Protection Network

The Trend Micro Smart Protection Network is a next-generation content security infrastructure designed to protect users from web threats by providing comprehensive protection while reducing the network and system impact. The Smart Protection Network correlates information on email, web and file reputation across Trend Micro solutions and leverages the collective knowledge of Trend Micro's vast, global customer base. Each new threat identified via a single customer's routine reputation check will automatically update databases around the world. By using centralized systems located in the cloud, information can be processed more quickly resulting in immediate access to threat intelligence.

BENEFITS OF SAAS SECURITY

- Powered by the Trend Micro Smart Protection Network, providing immediate and automatic protection from the latest threats
- Always updated security information; no need for file downloads or security patches
- Threat data is shared and correlated across threat vectors for comprehensive protection
- Lower cost of ownership due to decreased hardware, software, and personnel requirements
- Trend Micro's industry-leading technology and security expertise

BENEFITS OF HOSTED SERVICES

- Trend Micro experts handle all maintenance and monitoring, freeing IT staff for other projects
- Easy deployment and faster delivery of new security capabilities providing protection from the latest threats
- Keeps threats off the network, preserving bandwidth, storage, and other costly resources
- Global infrastructure backed by fully redundant data centers, ensuring uptime
- Highly scalable, allowing the addition of new services and users as needed

INCREASED SECURITY COMPLEXITY

- Web threats are evolving
- The number of attacks is growing
- Blended attacks are getting more sophisticated
- Security products need continual maintenance
- Personnel and systems costs are rising
- Regulatory compliance is difficult

TREND MICRO SAAS SECURITY

- Reduces the complexity of security
- Always updated protection
- Keeps threats off the network
- Lower cost of ownership
- Available, reliable, scalable infrastructure
- Simplified deployment, maintenance, and support
- Security expertise you can count on

SaaS Security Components

The SaaS security components of the Smart Protection Network, which include email reputation, web reputation, and file reputation, power Trend Micro's on-premise and hosted content security solutions by providing immediate implementation of the most up-to-date security information. On-premise solutions use a light weight client application that leverages the SaaS security components, resulting in a cloud-client infrastructure that reduces the demand on system resources and reliance on time-consuming signature-downloads.

SaaS Security Services

Trend Micro's SaaS security services deliver up-to-date threat protection powered by the Smart Protection Network. In addition, hosted services provide simplified deployment with rapid delivery of new features and capabilities. All SaaS services are managed by Trend Micro's security experts who oversee all operations, system upgrades and maintenance, allowing IT staff to focus on other business-critical projects.

Trend Micro SaaS Security Services

MESSAGING SECURITY

- >> **InterScan™ Messaging Hosted Security** stops spam and other email threats before they reach your network. In addition, Trend Micro performs all updates and tuning with little to no maintenance required from your IT staff.
- >> **Email Encryption for InterScan Messaging Hosted Security** is an add-on service that efficiently secures email delivered to anyone with an email address.
- >> **Email Reputation Services** is a highly effective, affordable first line of defense that stops up to 80% of spam at its source—before spam can flood the network and burden IT resources.

WEBSITE SECURITY

- >> **Trend Micro™ SecureSite** protects ecommerce by scanning for website vulnerabilities that threaten your customer privacy, business reputation, and ecommerce revenue.
- >> **Trend Micro™ Web Application Security** helps secure websites before systems are compromised by scanning for vulnerabilities and generating detailed remediation reports.

SMALL BUSINESS SECURITY

- >> **Worry-Free™ Business Security Hosted (Beta)** protects multiple PCs from viruses, spyware, and web threats. With no configuration and no extra software/hardware, it's easy to defend your small business and its reputation.

NETWORK SECURITY

- >> **Threat Management Solution** delivers the industry's most comprehensive solution to discover, mitigate, and manage threats in your internal network.

CHANNEL MANAGEMENT TOOLS

- >> **Worry-Free Remote Manager** is a secure, hosted web console that helps small business resellers manage multiple Worry-Free Security customers from anywhere.

BY THE NUMBERS

- Trend Micro Smart Protection Network handles more than five billion URL, email, and file queries daily.
- Trend Micro processes more than 50 million IP addresses and URLs daily.
- More than 250 million sample submissions originate from Trend Micro's comprehensive, global threat collection system of traps, honeypots, product feedback loops, and other proven collection techniques.
- Trend Micro maintains datacenters in five locations around the globe, processing more than 1.2 terabytes of data every day.
- Trend Micro has more than 1,000 security experts committed to constant global threat surveillance and attack prevention.
- Every day, Trend Micro breaks 8 to 10 million infections.
