

UGS PLM Software Selects Trend Micro™ OfficeScan™

UGS, a division of Siemens, is a computer software company specializing in 3D and Product Lifecycle Management (PLM) solutions. Thousands of engineers demand the best possible security software to protect work in progress on desktops, laptops, and servers both on and off the company's network

"When we originally looked for a new security solution, we evaluated everything under the sun. Trend Micro OfficeScan was clearly number one for manageability and overall protection."

— Craig Berry, Senior Vice President and Chief Information Officer, UGS PLM Software, Plano, Texas

KEY BENEFITS

- Achieve best rates of success for catching Web, file-based, and blended threats
- Gain the ability to centrally manage and configure security solutions at granular level
- Extend protection to more than 10,000 PCs and servers without impacting the network
- Efficiently update all systems, including those that are not on the company's network

Protecting Engineering Assets

As the provider of award-winning engineering software solutions, UGS PLM Software requires security technology that can protect its intellectual property. Current and future software offerings are developed, tested, manufactured and marketed by teams that are spread across 109 networked sites throughout the world. Any employee's system can contain software files and confidential team messages vital to an ongoing project.

High-Level Project Goals

- Protect intellectual property on desktops, laptops, and servers
- Provide IT with centralized management for all worldwide locations
- Deploy the best protection against viruses, spyware, blended and Web threats
- Keep all systems up to date for continuous protection

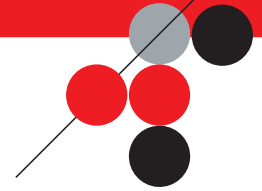

Why Trend Micro?

"When we originally looked for a new security solution, we evaluated everything under the sun," said Craig Berry, senior vice president and chief information officer, UGS PLM Software. "In our software company, the engineers demand that we use only the best. Trend Micro OfficeScan was clearly number one for manageability and overall protection. Every year we re-evaluate the alternatives and OfficeScan has maintained its lead over the competition."

Active Beta Testing

UGS PLM Software has seen OfficeScan evolve over the years. Berry added, "We were an early adopter of OfficeScan. Through the years we've been continually impressed with the quality of each release, starting with the Beta versions. Trend Micro is professional, responsive, and a real pleasure to work with."

The cooperative relationship between UGS PLM Software and Trend Micro engineers proved valuable for both companies during beta testing for the recent release of OfficeScan 8.0. This new release introduced more functionality than any previous release, and UGS PLM Software was able to provide valuable feedback and suggest ways to ensure the success of the solution against emerging blended Web threats. UGS takes advantage of the new features including the enhanced Web-based console and certified support for Windows® Vista™ systems.
